The global Spooled Pure Aluminum Welding Wire market size is predicted to grow from US\$ 102 million in 2025 to US\$ 156 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Spooled pure aluminum welding wire consists of solid pure aluminum filler wire—typically with an aluminum content of at least 99.0%—precision layer-wound onto a spool for continuous feeding into the welding gun via a wire-feed mechanism; it is primarily used for MIG/GMAW welding. Representative grades include AWS A5.10 ER1100, ISO 18273 S Al 1070, as well as Al99.0, Al99.5, Al99.7, and Al99.8. It features excellent electrical and thermal conductivity, ductility, corrosion resistance, and color matching for post-weld anodizing. Key applications include power conductors, busbars, electrical housings, heat dissipation components, chemical pipelines and storage tanks, food processing equipment, heat exchangers, refrigeration equipment, aluminum containers, architectural decorative parts, furniture, sheet metal and spun products, non-structural transportation components, and industrial maintenance. The upstream supply chain primarily comprises primary aluminum, controlled recycled high-purity aluminum, 1000-series aluminum rods and wire blanks, minor alloying/adjustment materials, wire-drawing lubricants, molds, plastic or metal spools, and moisture-proof packaging. Midstream production involves a sequence of processes: melting and composition control, continuous casting and rolling, multi-stage wire drawing, annealing, surface shaving, degreasing or ultrasonic cleaning, diameter and cast/helix inspection, precision layer-winding, wire-feed performance testing, and hermetic packaging; the removal of surface oxides, grease, and scratches minimizes porosity and enhances welding reliability. Downstream distribution channels—including welding consumable distributors, manufacturers of welding machines and wire-feed equipment, and industrial gas suppliers—deliver the product to enterprises in sectors such as power and electrical

engineering, chemicals, food machinery, HVAC and refrigeration, architectural decoration, and transportation manufacturing.
