Gross Profit Margin: 32%. Spot Meters are handheld or bench-top devices used to measure light intensity (illuminance) at a specific point or “spot”) rather than over a wide area. The industry chain for spot meters begins upstream with suppliers of photosensors, photodiodes, microcontrollers, and display/electronic components; midstream manufacturers assemble the devices, calibrate sensors, and integrate software for data display and logging; downstream, distributors, retailers, and service providers deliver spot meters to photographers, cinematographers, architects, horticulturists, and industrial users, ensuring installation, calibration, and after-sales support. Spot meters are invaluable tools for anyone needing precise, localized light measurements. They enable photographers, cinematographers, lighting designers, and industrial users to achieve optimal illumination, maintain consistency, and ensure compliance with lighting standards, making them a highly efficient and reliable instrument in both creative and technical applications.
