The global Spray Dust Suppression Pump market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The spray dust suppression pump achieves the effect of spray dust suppression by supplying the pressurized water required by the spray system. This equipment uses a high-pressure pump to send water into the nozzle, forms fine droplets through spraying, and evenly spreads these droplets into the air, thereby combining with the fine particles suspended in the air and making them fall quickly, achieving the purpose of purifying the air and reducing dust pollution.

The spray dust suppression pump is a large-flow, high-pressure spray dust suppression pump station designed specifically for large and medium-sized coal mining machines, tunneling machines and other heavy machinery and equipment.
