A spray wash system is a type of cleaning system that uses high-pressure water or cleaning solution to remove dirt, grime, and other contaminants from surfaces. It typically consists of a pump that pressurizes the water or cleaning solution, a spray nozzle or gun that directs the spray onto the surface, and a system for collecting and disposing of the wastewater.

Spray wash systems are commonly used in various industries and applications, including automotive, manufacturing, agriculture, and food processing. They can be used to clean vehicles, machinery, equipment, parts, and other surfaces.

The high-pressure spray generated by the system helps to effectively remove stubborn dirt and contaminants, making it a more efficient and thorough cleaning method compared to traditional methods like scrubbing or rinsing with a hose. Additionally, some spray wash systems may also incorporate features like heated water or detergent injection to further enhance the cleaning process.
