A sprayer boom is a crucial component of agricultural and industrial sprayers used for the application of liquids, such as pesticides, herbicides, or fertilizers. It refers to a structural framework that extends horizontally from the sprayer vehicle, carrying multiple spray nozzles. The boom is typically adjustable in width and height and allows for efficient and uniform distribution of the liquid over a large area. It ensures precise and even coverage, minimizing overlaps and wastage. Booms can vary in design, ranging from simple straight bars to more complex folding or telescopic configurations, allowing flexibility in different field conditions.
