The global Spraying Corn Husk Powder market size is predicted to grow from US\$ 410 million in 2025 to US\$ 549 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Spraying corn husk powder, also known as sprayed corn husk or corn bran, is a feed ingredient with high nutritional value produced during corn processing. In the production of edible corn starch or alcohol, after the corn is wet-soaked, its cortex is separated to form corn husks. Then, corn slurry (concentrated corn soaking liquid) with high protein and energy content is sprayed onto the corn husks, and then dried to make slurry corn husks powder.

Through shotcrete treatment, the protein content in corn husks is significantly increased. Generally, the crude protein content can reach 16%-22%, which can provide a rich nitrogen source for animals. At the same time, a large amount of fiber in corn husks is retained, which helps promote intestinal peristalsis in animals and maintain normal digestive functions. However, excessive use may affect the overall digestibility of the feed. Its energy level is also increased due to the addition of corn steep liquor, which can provide energy for animal growth. It also contains some vitamins, minerals, amino acids and other nutrients to make the nutrition more balanced.

Spraying corn husk powder is mainly used in the feed industry and is an ideal feed product. It is widely used in ruminant animal breeding, which can promote ruminant animals to show better production performance; it can also be used in poultry feed, but generally the amount added should not be too much; in pig feed due to high mycotoxins and poor palatability, etc. For some reasons, its use is subject to certain restrictions.

The global market for corn husk powder is anticipated to expand due to the increasing preference for sustainable materials. Corn husk powder, a natural product derived from corn husks, is being recognized for its various applications, which drives the growth of the spraying corn husk powder market.

North America is a major consumer and producer region. The region has a developed agricultural industry, and the demand for animal feed is high. With the increasing focus on sustainable development, the use of corn husk powder in animal feed and other applications is expected to increase.

The market in Europe is also growing. The presence of major players and their investment in research and development to develop new applications for corn husk powder are expected to drive market growth. In addition, the European Union has strict regulations on environmental protection, which promotes the use of sustainable materials such as corn husk powder.

The Asia-Pacific region has a large population and a growing demand for animal products. This has led to an increase in the demand for animal feed, which in turn drives the growth of the spraying corn husk powder market. Moreover, countries like China and India are major producers of corn, providing a rich raw material source for the production of corn husk powder.
