A spring guide pin is a type of guide pin designed for use in the center of a coil spring. It serves as a guide when the spring is activated. One end of the guide pin features a threaded portion, which is threaded into the base of the spring to secure it in place. The other end typically includes a hexagonal wrench hole or a similar feature for attaching the guide pin.

A similar product to the spring guide pin is the spring pin. Spring pins are created by rounding a spring plate to provide a gap at the mating part. These pins are then inserted into a pre-drilled hole, often used as hinges or to prevent the spring from slipping out by utilizing the spring's radial force.

The global Spring Guide Pin market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
