A pressure Relief Valve is a safety device designed to protect a pressurized vessel or system during an overpressure event.

An overpressure event refers to any condition which would cause pressure in a vessel or system to increase beyond the specified design pressure or maximum allowable working pressure (MAWP).

The primary purpose of a pressure Relief Valve is protection of life and property by venting fluid from an overpressurized vessel.

The spring-loaded relief valve is a conventional pressure relief valve that is commonly

used in liquid service valves. The valve opens proportionally as the pressure increases to overcome the spring pressure.

Market would still face such risks, including the prolonged US-China trade friction, and the UK's withdrawal from the EU, as well as the economy deteriorated sharply toward the end of the year due to the spread of new coronavirus infections.
