Spring wire connectors and twist-on wire connectors are both types of wire connectors used in electrical connections. However, they differ in their design and application.

Spring wire connectors are electrical connectors that use a spring mechanism to hold wires in place. They are designed to make wire connections easy and secure without

the need for twisting or special tools. Spring wire connectors are available in various types, including push-in wire connectors, lever connectors, and multiple conductor connectors.

Twist-on wire connectors, on the other hand, are screw-on connectors that use a twisted cap to hold wires together. They are designed to twist wires together tightly and hold them securely in place, creating a strong electrical connection. Twist-on wire connectors are commonly used in residential and commercial applications, including electrical boxes, light fixtures, and appliances.
