Abstracts

The global Spring Steel market size is predicted to grow from US$ 12639 million in 2025 to US$ 14163 million in 2032; it is expected to grow at a CAGR of 1.8% from 2026 to 2032.

In 2025, the global sales volume of spring steel was approximately 17 million metric tons, with an average price of 760 US dollars per ton, and the average gross profit margin of the industry was 22%.Spring steel is a special structural steel used for manufacturing various elastic components, featuring high elastic limit, high fatigue strength, good toughness and anti-relaxation properties, enabling long-term elastic recovery under alternating loads. Classified into carbon spring steel and alloy spring steel by composition, it is commonly supplied as round bars, flat bars, wire rods, steel wires and strips. It is widely used in automotive suspensions, mechanical damping, rail transit, precision instruments, etc., serving as a key basic material for buffering, energy storage and reset in modern industry.

As a subcategory of high-end special steel, spring steel enjoys steady market expansion driven by automotive lightweighting and upgrading of high-end equipment. Alloy spring steel and high-end spring steel wires grow significantly faster than the industry average, with Asia Pacific as the core consumption region. The industry features head concentration; enterprises with core smelting and heat treatment technologies hold strong competitiveness. Low-carbon, high-strength and long-life performance become key trends for product upgrading.
