Spring testing machine is a special instrument for testing springs. After the production of springs, before use, to pass a strict test before use, because most of the springs are used in machinery, vehicles above the main components, such as springs on the vehicle, if the springs installed in the car did not undergo strict testing, randomly installed in the vehicle above the use, the performance does not meet the requirements, it is easy to cause very serious consequences; and then as the spring for shock absorption, because the performance of decline, making the vehicle out of balance, easy to cause traffic accidents. This concludes that the main role of the spring testing machine is to test and analyze the strength of tension, pressure, displacement, stiffness and other precision springs such as tension springs, compression springs, disc springs, tower springs, plate springs, card springs, leaf springs, composite springs, gas springs,

mold springs, anisotropic springs, etc.
