A hot runner system is an injection molding system that keeps the plastic in a molten state within the runner by heating. The plastic flows from the injection molding machine nozzle, is diverted by the hot runner plate, and then directly injected into the mold cavity through the hot nozzle gate.

Upstream industries mainly include suppliers of core components such as heating elements (heating rods/heating coils), thermocouples, temperature controllers, hot runner plates, hot nozzles, and other components, involving high-temperature alloys and precision machining technologies. Downstream industries cover automotive manufacturing (lighting, interior and exterior trim), medical technology, electronics, packaging, and home appliances, with applications achieved through mold manufacturers supplying these systems and injection molding companies purchasing them.

The global unit price of a hot runner system is \$3,098, with annual sales of approximately 1.1067 million units and a global production capacity of 1.3 million units. The industry profit margin is 18%.
