Spun-bonded non-woven is a mixture of porous flat sheets and fabrics like materials which contains either molten plastic or plastic films with long fibers bounded together by hot-press. As they are not made by a method of knitting or weaving made them totally distinct from other fibers. A raw material which is thermoplastic in nature is used, such as plastic-based materials like polypropylene and polyesters, which becomes softer on heating and harder when cooled down. Spun-bonded non-woven bags have different properties, such as resistant to heat and chemical but porous in nature.
