A Square Cone Mixer is a type of industrial mixing equipment used in various industries to blend dry powders, granules, or other solid materials. It is named for its unique mixing chamber, which typically has a square or rectangular cross-section that transitions into a conical shape. This design facilitates efficient mixing by creating a combination of convective and diffusive motion within the mixing chamber.

The development of more sophisticated mixing algorithms and control systems can improve mixing efficiency and consistency. This may include the use of computational fluid dynamics (CFD) simulations to optimize mixer design and operation.
