The square piezoelectric ceramic stack is a precision actuator composed of multiple layers of piezoelectric ceramic sheets, which can produce tiny linear displacement or deformation under the action of an electric field. It is characterized by high resolution, fast response and excellent repeatability. The advantage of the square piezoelectric ceramic stack is that it can withstand large forces and provide stable output forces. At the same time, it has a small size and weight, which makes it easy to integrate into various precision positioning and micro-displacement control systems. Due to its excellent performance, the square piezoelectric ceramic stack has been widely used in precision engineering, micro-electromechanical systems, optical adjustment and other fields, providing efficient and reliable micro-displacement solutions for these fields.
