A squeeze grip valve is a type of valve that is designed to be easily operated by hand. The valve works by squeezing or compressing a rubber or plastic sleeve that surrounds the flow path of the valve. When the sleeve is squeezed, it closes off the flow of fluid or gas through the valve. When the sleeve is released, it opens up the flow path and allows the fluid or gas to flow through the valve again. Squeeze grip valves are commonly used in applications where quick and easy control of fluid or gas flow is required. They are often used in medical equipment, such as blood pressure monitors, IV lines, and respiratory equipment. They are also used in plumbing systems, fuel lines, and pneumatic systems.
