The global SSR Flyback Controller market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

SSR Flyback Controllers are used to control solid state relays based on flyback converters. A flyback converter is a power converter that converts an input voltage to a desired output voltage, and is commonly used for power management and voltage regulation, while an SSR (Solid State Relay) is a relay with no mechanical moving parts, which realizes the switching function through semiconductor components. The main advantages of SSR flyback controllers are their efficient control capability and stable performance, which can improve the overall efficiency and reliability of the system. Through reasonable selection and application of different types of SSR flyback controllers, effective control of various electrical equipment and systems can be realized.
