SSR optocoupler is a photoelectric coupling device specially used for the input control end of solid-state relays. It is usually composed of a light-emitting diode (LED) and a photosensitive device (such as phototransistor, photogate thyristor, phototransistor, MOSFET array) packaged in the same chip, and uses optical signals to achieve electrical isolation between input and output. This device has the characteristics of fast response speed, strong insulation performance, strong anti-interference ability, and no contact loss. It is the core component of solid-state relay input signal conversion.

United States market for SSR Optocoupler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
