Stab-in cement float shoe and collar are components used in oil and gas well drilling and completion operations. The float shoe is installed on the bottom of the casing string, and the collar is placed above it. These devices facilitate the placement of cement in the annular space between the casing and the wellbore. The stab-in design allows for efficient cementing operations by preventing the backflow of cement and ensuring a proper seal between the casing and the wellbore. The cement float shoe and collar help to prevent gas or fluid migration, provide zonal isolation, and support the structural integrity of the well.
