The global Stacked Energy Storage market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Stacked energy storage often uses chemical battery such as lithium-ion batteries or lead-acid battery. Multiple battery cells can be connected in series to obtain higher voltage output. Because stacked energy storage has high energy density, long life, and can be quickly charged and discharged, it is often used as residential backup power supply. Its characteristics are in line with the trend of green environmental protection and 'freedom of electricity use', and the development prospects are good.

Stacked energy storage is a power system that uses multiple battery cells that are connected together in a specific way to provide higher voltage and capacity.
