The global Stacked Foil Capacitor market size is predicted to grow from US\$ 3078 million in 2025 to US\$ 4444 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

A Stacked Foil Capacitor is a type of film capacitor in which multiple layers of dielectric film and metal foil electrodes are cut and stacked together to form a compact capacitor element. Unlike traditional wound film capacitors that use a rolled structure, stacked foil capacitors adopt a layered (laminated) structure, which provides lower equivalent series inductance (ESL), better current handling capability, and improved thermal performance. They are widely used in high-power and high-frequency applications such as DC-link circuits, inverters, motor drives, electric vehicles, and renewable energy systems. In 2025, global Stacked Foil Capacitor production reached approximately 1.43 billion units, with an average global market price of around 2.2 USD/unit. The production capacity for Stacked Foil Capacitor in 2025 was approximately 1.5 billion units. The typical gross profit margin for Stacked Foil Capacitor between 20% and 40%.

United States market for Stacked Foil Capacitor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Stacked Foil Capacitor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
