The global Stainless Steel Cold Rolling Oil market size is predicted to grow from US\$ 388 million in 2025 to US\$ 519 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2025, the global production of stainless steel cold rolling oil is approximately 128,000 tons, with an average selling price of about US\$3,100 per ton. The capacity of a single production line is approximately 3,000-6,000 tons per year, with an average gross profit margin of about 10-20%. Stainless steel cold rolling oil is a lubricant used in the cold rolling process of stainless steel sheets. Its main functions are to reduce friction between the rolling mill and the steel sheet, lower processing temperature, prevent surface damage and oxidation, and provide surface cleanliness and rust protection, ultimately producing stainless steel products with a smooth surface, precise thickness, and good mechanical properties.

The upstream core raw materials for stainless steel cold rolling oil mainly include base oils (mineral oil, synthetic esters, or polyalphaolefins, etc.), functional additives (such as extreme pressure anti-wear agents, oiliness agents, antioxidants, rust inhibitors, emulsifiers, etc.), and deionized water used for emulsion preparation. Its downstream application is highly focused on the cold rolling process of stainless steel, directly serving stainless steel sheet and strip manufacturers, and is used to produce high-surface-quality stainless steel finished products widely used in construction and decoration, home appliances, catering equipment, medical devices, automotive parts, and high-end industrial equipment.

The stainless steel cold rolling oil market is showing a steady growth trend globally, primarily driven by increasing demand for stainless steel and advancements in cold

rolling processing technology. With the widespread application of stainless steel in various industries such as construction, automotive, home appliances, and medical equipment, particularly the growing demand in the Asia-Pacific region (especially China and India), the market demand continues to expand. Cold rolling oil is mainly used to reduce friction during the stainless steel cold rolling process, improve production efficiency, reduce heat damage, and prevent surface damage, while also providing cooling and rust prevention functions. The main types of cold rolling oils on the market include mineral oil-based, synthetic oil-based, and water-soluble cold rolling oils. Synthetic and water-soluble oils are gradually replacing traditional mineral oil-based oils due to their superior lubrication and environmental performance. With increasingly stringent global environmental regulations, the demand for water-soluble and environmentally friendly cold rolling oils is continuously increasing. Furthermore, with technological innovation and advancements in production processes, the performance and stability of cold rolling oils are constantly improving, driving the application of high-end products, especially in precision cold rolling. Overall, the stainless steel cold rolling oil market is expected to continue to grow in the coming years, with increased market competition. Manufacturers will need to improve product performance and services to meet the growing demand.
