Stainless Steel Compression Weigh Modules are modular sensor devices made of stainless steel that measure material weight by detecting pressure deformation. Combining strain gauges with stainless steel elastic elements, the product generates micro-deformation under material weight and outputs corresponding electrical signals. Featuring IP66/IP69K protection ratings and resolution up to 5000d, it operates stably in high-temperature, high-humidity, and corrosive environments. It is primarily used in material hoppers, tanks, and process weighing systems across food processing, pharmaceutical, and chemical industries. The global market for stainless steel compression weigh modules is approximately \$1,245 million USD in 2025, with an annual sales volume of about 2,850 thousand units. The projected CAGR for the next five years is about 7.8%. The market price is \$437 per unit, single-line annual production capacity ranges from 30,000 to 50,000 units, and industry gross margins are generally between 28% and 42%.
