Deionized water equipment is an ion exchange system. The ion exchange system is a traditional water treatment process that replaces various anions and cations in water through anion and cation exchange resins. Anion and cation exchange resins can be combined in different proportions to form an ion exchange cation bed system, system and ion exchange mixed bed system, and the mixed bed system is usually used to produce ultrapure water and high-purity water terminal process after reverse osmosis and other water treatment processes. It is used to prepare ultra-pure water and high-purity water. One of the means.
