The stainless steel electric vibrating screen is a device that uses electric drive to generate vibrations to screen and analyze materials. It is mainly made of stainless steel, so it has good corrosion resistance and durability. The working principle of the device is to generate excitation force through the motor-driven vibrator to vibrate the screen body. This vibration causes the material to be thrown, rolled and slid on the screen surface, thereby achieving material screening. By adjusting the speed of the motor and the excitation force of the vibrator, the accuracy and efficiency of the screening can be controlled.
