The global Stainless Steel EP (Electropolished) Pipe market size is predicted to grow from US\$ 670 million in 2025 to US\$ 1207 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

In 2025, global Stainless Steel EP (Electropolished) Pipe production reached approximately 96,000 km, with an average global market price of around US\$7,100/km. In 2025, the global 's total production capacity of Stainless Steel EP (Electropolished) Pipe reached 120,000 km. The industry average gross profit margin of this product reached 38%.Electropolished stainless steel tubes (EP tubes) are tubing produced by using stainless steel as the anode in a specific electrolyte. Electrolysis selectively dissolves the microscopic protrusions on the surface, achieving a refined and strengthened surface. Compared to traditional mechanical polishing, this process significantly reduces internal wall roughness, resulting in a mirror-like surface. Its core value lies in simultaneously achieving high surface finish and excellent corrosion resistance, thanks to the dense passivated oxide layer formed during polishing. Therefore, it is specifically designed for fluid transport systems in biopharmaceuticals, semiconductor manufacturing, and other industries with extreme requirements for cleanliness and corrosion resistance.

The industry chain is clearly structured, with added value concentrated in the midstream and downstream. The upstream mainly consists of suppliers of high-purity stainless steel raw materials and chemical raw materials. The midstream comprises the core manufacturing and processing stages, including cold rolling/cold drawing of the stainless steel base tube, welding or piercing, and the crucial electrochemical polishing surface treatment. The downstream is the application market, highly concentrated in demanding high-tech and high-value-added industries, including semiconductor

manufacturing, biopharmaceuticals, photovoltaics, and high-requirement laboratories.

The market prospects are broad, with strong growth certainty, driven primarily by the continued expansion and upgrading of downstream high-end manufacturing. Meanwhile, the ultra-high purity EP tube sub-market, demanding extremely high purity, is also developing rapidly. In the future, with increased global semiconductor capacity expansion, increased investment in biopharmaceutical R&D, and the expansion of demand in emerging fields such as new energy, the market size will continue to grow. Industry competition will increasingly focus on the refinement of technology and processes, the improvement of product stability, and the ability to customize products for specific scenarios, exhibiting an overall trend towards high-end and specialized development.
