## Abstracts

The global Stainless Steel Flexible Connector market size is predicted to grow from US\$ 3258 million in 2025 to US\$ 5273 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global sales of stainless steel flexible connectors reached 185 million units, with an average selling price of US\$18 per unit. Stainless steel flexible connectors are key components that use stainless steel corrugated pipes or braided mesh as their core, absorbing vibration, compensating for displacement, and reducing noise to ensure the safe operation of piping systems. They are widely used in HVAC, petrochemical, power, shipbuilding, rail transportation, and industrial equipment. Upstream raw materials mainly include 304/316 stainless steel strip, stainless steel wire, flanges, and welding accessories; midstream processes include forming, welding, braiding, and testing; downstream customers include HVAC system integrators, equipment manufacturers, and engineering contractors. In 2025, the global total production capacity of stainless steel flexible connectors was approximately 220 million units, with an industry average capacity utilization rate of approximately 84%. In terms of profitability, the industry's average gross profit margin is approximately 25%–30%, with material costs accounting for nearly 60%, making it highly sensitive to fluctuations in stainless steel prices. From a demand and opportunity perspective, urban infrastructure upgrades, industrial equipment replacements, and the construction of new energy sources and data centers continue to drive demand growth. The future lies in upgrading high-temperature and corrosion-resistant materials, lightweight and high-fatigue-life designs, and high-end flexible connection solutions combined with intelligent monitoring systems, which will bring stable medium- and long-term development space to the industry.
