## Abstracts

The global Stainless Steel FPC Stiffener market size is predicted to grow from US\$ 56.87 million in 2025 to US\$ 83.82 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Global production of Stainless Steel FPC Stiffener is projected to reach 2 million square meters by 2025, with an average selling price of \$28 per square meter. The industry's average gross profit margin is approximately 30%.

FPC is an indispensable component material for achieving product miniaturization and lightweighting. However, due to its thinness and flexibility, some problems may arise, necessitating the use of Stiffener. These plates increase the rigidity and thickness of FPC connectors and the areas where they are assembled with components. They also prevent solder and component detachment and adjust the thickness of the FPC.

Stainless steel is an iron alloy with added chromium and nickel, possessing higher strength than resin. Therefore, as a reinforcing plate, it can be made very thin, commonly used in products requiring thinner structures. Furthermore, it offers advantages such as high conductivity, the ability to form a grounding loop, effective prevention of electromagnetic noise, higher heat resistance than resin (it does not age even at high temperatures), and the ability to be used as a housing.

United States market for Stainless Steel FPC Stiffener is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Stainless Steel FPC Stiffener is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Stainless Steel FPC Stiffener is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
