The global Stainless Steel Mixing Tank market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The stainless steel stirring tank is composed of a stirring tank body, a stirring tank cover, a stirrer, a support, a transmission device, a shaft seal device, etc., and a heating device or a cooling device can also be configured according to process requirements. The stainless steel mixing tank body and the mixing tank cover can be connected by flange sealing or welding. The stirring tank body and stirring tank cover can be opened according to the process requirements for feeding, discharging, observation, temperature measurement, pressure measurement, steam fractionation, safety venting and other process pipe holes. The upper part of the stainless steel mixing tank cover is equipped with a transmission device (motor or reducer), and the agitator in the mixing tank is driven by the transmission shaft. The shaft sealing device can adopt various forms such as mechanical seal or packing, labyrinth seal and so on. The agitator can be configured in various forms such as paddle type, anchor type, frame type, and spiral type.

The development direction of mixing equipment mainly has the following aspects: intelligence, energy saving, environmental protection, integration and multi-function. Through the use of advanced control systems, sensors, frequency converters and other equipment, the automation, digitization and informatization of the mixing process are realized; by optimizing the structure, materials and parameters of the mixer, the mixing efficiency and quality are improved, and energy and material consumption are reduced;

Noise, low emission, low pollution and other technologies reduce the impact of the mixing process on the environment; by integrating multiple functions into one, one tank with multiple functions and one machine with multiple functions can be realized; Process needs. These development directions will bring wider application space and stronger competitiveness for mixing equipment.
