The common types of passivating agents, for the chemical treatment of stainless steel in order to offer corrosion resistance, are available as organic oils, inorganic chemical passivates and passivating agent films. It is widely used for the coil coating process in steel industries. The passivating agents offer temporary protection to components and parts machined of stainless steel by reducing the reaction of the metals. The passivating agents when applied, slowdown the corrosion rate on the surface of the respective tools and equipment.
