Stainless steel rebar is a product similar to carbon steel reinforcing bar in size and shape, but with the special characteristic that its chemical composition is of a stainless steel type, which ensures a better performance against corrosion and provides mechanical properties, depending on the type of stainless steel used, similar or superior to those of carbon steel. This product is used to reinforce concretes in particular areas where there is a high risk that the reinforcement will suffer corrosion problems. These problems can cause the structure to collapse. It has higher corrosion resistance, lower permeability, and greater elasticity, thus extending service life and reducing maintenance costs, maintenance-related downtime, and structural life cycle costs. So it is widely used in coastal barrier there are risks of chlorine ion corrosion, concrete pier, bridge, highway exit ramp, docks, coastal areas of parking lots, tunnels, Bridges and airport taxiway, wastewater treatment plants, hospitals, and other medical facilities, equipped with MRI machine with electronic detection of toll passes, laboratories,

chemical plants, seismic belt, etc.
