The global Stainless Steel Rivet Nut market size is predicted to grow from US\$ 166 million in 2025 to US\$ 255 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Stainless Steel Rivet Nut is a type of fastener made from stainless steel, commonly used to create strong threaded connections in thin plates or tubes. The installation process involves pressing the rivet nut into a pre-drilled hole and securing it through tightening or riveting, providing a durable threaded connection in the structure. Due to the superior corrosion resistance and high-temperature performance of stainless steel, these rivet nuts are widely used in various industrial environments requiring durability and reliability, such as machinery, construction, and automotive manufacturing.

The demand for stainless steel rivet nuts is growing due to their excellent corrosion resistance and broad application range. As industrial and construction sectors require higher quality fasteners, the design and manufacturing technologies for stainless steel rivet nuts are advancing. Manufacturers are developing new stainless steel alloys with higher strength and corrosion resistance and using advanced production processes like precision cold working and surface treatment to enhance durability and applicability. Additionally, with stricter environmental regulations and the push for sustainable materials, recycling and resource optimization of stainless steel rivet nuts are becoming key areas of focus.
