Stainless Steel Spray Tower is an environmentally friendly equipment that can both remove dust and absorb and purify waste gas. It is also called a spray tower, a washing tower, a packing absorption tower, etc. The specific structure consists of an air inlet section, a gas distribution layer, a packing layer, a spray It is composed of shower section, dehydration and mist layer, air outlet section, water tank, circulation pump, automatic dosing and PH monitoring. It has the advantages of significant dust removal and waste gas absorption effect, high comprehensive cost performance, etc. It is especially suitable for treating high-temperature flue gas. It has become an indispensable equipment in the industrial waste gas treatment industry. Stainless steel spray towers are divided into vertical and horizontal spray towers according to design. The working principle of the vertical structure is gas-liquid two-phase reverse contact. The working principle of the horizontal structure is gas-liquid two-phase cross-flow contact. The exhaust gas passes through the filler. The layer contact with the liquid phase absorbs and neutralizes, thereby achieving the purification effect. Spray washing can simultaneously cool the exhaust gas and remove the particles contained in the exhaust gas. The absorbed and purified gas is then discharged into the atmosphere after being processed by the demisting section. . After washing and absorption, the waste liquid is collected into the water collection tank and then discharged to the wastewater system for treatment.

The global Stainless Steel Spray Tower market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
