Stainless Steel Trim Strip is a precision-rolled flat stainless product used for edge finishing, decorative accents, protection, and reinforcement across construction, automotive, furniture, marine, and appliance industries. Produced mainly from grades 304, 316, and 430, it combines strength, corrosion resistance, and aesthetic appeal. The supply chain begins upstream with stainless steelmaking using iron ore, nickel, chromium, and molybdenum, which are smelted and cast into slabs or coils. Midstream processing includes cold rolling, slitting, polishing, and applying surface finishes such as brushed, mirror, or embossed to create narrow-width strips. Downstream, these strips are fabricated into moldings, corner trims, elevator panels, kitchen appliances, and vehicle body trims, with value addition at each stage through finishing and customization. The global market produces about 1.1 million tons annually against a capacity of ~1.45 million tons, with unit prices ranging from USD 2.8–7.5 per kg depending on grade, finish, and dimensions, while average gross margins stand at around 21%.
