Stand-up Pouch Valves are pouches with aroma protection valves that can store commodities for a long period of time, keep them staying aromatic and fresh.

When packaging products that emit gases after the bags are sealed, the bags often expand and the gases inside need to be released to prevent bursting. Our patented one-way degassing valve was created to allow those excess gases to escape without letting outside air substances back in. This device is designed to keep your product fresh while also serving as a pressure relief system. It was mostly used in the coffee industry but is now being used in expanding applications.
