According to our LPI (LP Information) latest study, the global Standalone & Non-Standalone 5G Network Infrastructures market size was valued at US\$ million in 2023. With growing demand in downstream market, the Standalone & Non-Standalone 5G Network Infrastructures is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Standalone & Non-Standalone 5G Network Infrastructures market. Standalone & Non-Standalone 5G Network Infrastructures are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Standalone & Non-Standalone 5G Network Infrastructures. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Standalone & Non-Standalone 5G Network Infrastructures market.

There are two infrastructure options for a 5G network, non-standalone (NSA) and standalone infrastructures. A non-standalone infrastructure relies partly on existing 4G LTE infrastructure and brings some new technology like 5G New Radio (NR). Standalone (SA) infrastructure refers to a 5G network that does not rely on LTE networks and has its own cloud-native network core that connects to the NR. It is expected that network carriers will arrive at a standalone infrastructure after moving through an NSA infrastructure.

5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.
