Standard Penetration Test (SPT) apparatus is a tool used in geotechnical engineering to determine the subsurface soil properties and the geotechnical strength characteristics. It consists of a thick-walled sampler or drive tube that is driven into the ground using a hammering action. The sampler collects soil samples at regular intervals as it advances into the ground. The number of hammer blows required to achieve a certain penetration, known as the SPT N-value, is recorded and used to assess the soil's resistance to penetration. The SPT test is widely used in site investigations for assessing soil suitability for construction, foundation design, and soil classification.
