Staphylococcal nuclease is an endonuclease enzyme derived from *Staphylococcus aureus*. It catalyzes the hydrolysis of phosphodiester bonds within nucleic acids, primarily DNA and RNA, resulting in the generation of smaller nucleotide fragments. SNase exhibits non-specific cleavage activity, acting on both single-stranded and double-stranded nucleic acids. Its versatility and robust activity make SNase a valuable tool in molecular biology and biotechnology for applications such as DNA fragmentation, RNA sequencing, and structural analysis of nucleic acids and protein-nucleic acid complexes.

The global Staphylococcal Nuclease market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
