Star delta starters are another device that may be used to reduce current demand during motor startup. It is often used for starting three-phase induction motors, but can only be used when starting the motor without load and when the required starting current is relatively low.

Star Delta starters are widely used in industrial applications such as pumps, compressors, fans, and conveyor systems. The demand for Star Delta starters is driven by industries like manufacturing, oil and gas, mining, and water treatment. These industries require efficient motor starting solutions for high-power applications, contributing to the market growth. Energy efficiency is a key concern for industries seeking to reduce power consumption and operating costs. Star Delta starters provide a method of reducing the starting current and torque during motor startup, resulting in energy savings. As industries emphasize energy efficiency to meet environmental regulations and achieve cost savings, the demand for Star Delta starters with their energy-saving attributes is expected to increase. The Star Delta starters market is expected to witness continuous growth due to industrial demand, the focus on energy efficiency, advancements in motor control technologies, integration with automation systems, safety compliance requirements, expansion of end-use sectors, and the emphasis on reliability and durability.
