The Star Elastic Coupling is a mechanical power transmission device that utilizes an elastic element to achieve torque transfer and compensate for misalignment. Its core structure consists of metallic hubs and a star-shaped elastomer, typically made of polyurethane or rubber, which absorbs axial, radial, and angular deviations through elastic deformation while reducing system vibration and noise. This coupling offers lubrication-free operation, compact design, and ease of installation, enabling flexible shaft connection under medium-to-low speed conditions. It effectively protects equipment from shock loads and is widely used in industrial machinery, automation systems, and power transmission applications.

United States market for Star Elastic Coupling is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
