The global Starch-based Biodegradable Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Starch-based biodegradable materials are a type of bioplastic made from starch, a natural polymer found in plants like corn, potatoes, and wheat. These plastics are designed to decompose more easily than traditional petroleum-based plastics, making them an eco-friendly alternative. Starch-based biodegradable plastics offer a more sustainable option compared to traditional plastics, particularly in reducing the long-term environmental impact of plastic waste. However, their biodegradability is highly dependent on environmental conditions, and they are most effective when disposed of in proper composting facilities.

United States market for Starch-based Biodegradable Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Starch-based Biodegradable Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
