The global Starch Based Mulching Film market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

The global demand for sustainable farming practices and reduction of environmental impact is driving interest in the development and adoption of biodegradable mulch films based on starch materials. Here are recent trends observed in the market:

1. Growing research and investment: Governments, universities, and private companies are investing resources in developing novel starch-based compositions, enhancing properties, and optimizing production techniques. These efforts aim to address existing challenges related to cost competitiveness, degradation rates, and functionality improvements.
2. Emerging partnerships between agritech firms and biochemical suppliers: Collaborations between companies specialized in biopolymer production and those focused on agriculture technology are creating opportunities for innovation in starch-based mulch film formulations. Such collaborations facilitate synergistic developments and expand market reach through cross-sector expertise.
3. Regional government policies promoting biodegradable materials: Regions facing significant plastic waste problems, particularly in Asia and Europe, are implementing regulations favoring environmentally friendly alternatives to conventional plastics in agriculture. Supportive policies encourage manufacturers to adopt starch-based mulch

film technologies and reduce the overall environmental burden of plastic waste.

4. Evolving consumer preferences: Consumer awareness regarding sustainable agriculture practices and negative effects of plastic waste is increasing globally. This shift in public opinion creates demand for eco-friendlier options among growers and end consumers, thereby driving market expansion for starch-based mulch films.

5. Focus on large-scale commercialization: Despite growing interest, most starch-based mulch film applications remain niche markets. However, companies committed to scaling up operations and streamlining production processes could bring costs closer to parity with synthetic counterparts, making them more accessible to larger segments of the agriculture sector.

Starch-based mulch film refers to agricultural plastic films produced from biodegradable starch compounds instead of traditional petroleum derivatives like polyethylene or polypropylene. These films offer eco-friendly alternatives to conventional plastics

commonly used for soil conservation practices like mulching. With increasing concern about plastic pollution and depleting fossil fuels, starch-based mulch films present a promising approach toward sustainable farming.
