Starch-blended biodegradable polymers are basically formed by combining starch and synthetic polymers. The second most popular form of biodegradable polymer is starch-based polymers. These polymers are crystalline in nature, extremely simple to make, and can include anywhere from 10% to over 90% starch. Because of its cheaper cost and wider availability, as well as its ecologically benign character, starch-based biodegradable polymers have gained a lot of traction in recent years as a viable alternative to petrochemical-based polymers.
