Starch is a naturally abundant nutrient carbohydrate consisting of a large number of glucose units, mainly obtained from natural sources such as corn, potatoes, wheat, rice, and other plant sources commonly prepared as white amorphous powder. Starch derivatives are prepared by treating starch through different processes such as hydrolysis, extraction, purification, and chemical treatment to be utilized in a wide range of food and non-food applications.

The growing preference for ready-to-consume food and beverages across the world is influencing the demand for starch derivatives significantly. The rising popularity of non-carbonated and energy drinks is complimenting this demand, as these beverages utilize natural sweeteners, of which these derivatives are important components. Apart from

this, starch derivatives also have significant application in textile weaving and finishing, and the production of biofuels and glue due to which their demand is increasing by leaps and bounds.
