The starter ring gear is the component that is connected to the internal combustion engine, the part of the assembly that transmits torque from the starter motor to the engine's crankshaft in order to start the engine. The starter ring is usually made of medium carbon steel. The starter ring is attached to the flywheel or flex plate of the engine. The teeth of the ring gear are driven by the smaller gear (called the pinion) of the starter motor. The pinion only engages the starter ring during cranking, and once the engine is running, the pinion backs out.

The global market for Starter Ring Gears is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Starter Ring Gears market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
