The global Static CT System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Static CT system is a type of computed tomography (CT) imaging technology that utilizes stationary X-ray sources and detectors rather than a rotating gantry. Unlike conventional rotating CT scanners, static CT systems have multiple X-ray sources positioned around the patient, eliminating the need for mechanical movement during the scan. This design allows for faster scanning times and reduces motion artifacts, improving image quality. Static CT systems are particularly useful for high-speed imaging and multi-energy imaging applications.

United States market for Static CT System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
