The report requires updating with new data and is sent in 48 hours after order is placed.

Static Meters measure voltage, field, charge and polarity without transferring any charge onto the actual instrument, as they are able to measure static electricity within inches of the surface area. After static electricity has been found, the next step in static elimination is to use an eliminator product, including anti static mats, gloves and ground straps to dissipate, conduct or balance the electrical charge. Besides troubleshooting a suspected ESD issue, static meters also test the performance of ionizers.
