The ion wind rod (static elimination rod) can generate a large number of air masses with positive and negative charges, which can neutralize the charges on objects passing through its ion radiation area. When the surface of an object is negatively charged, it will attract the positive charges in the radiation area, and when the surface of an object is positively charged, it will attract the negative charges in the radiation area, thereby neutralizing the static electricity on the surface of the object and achieving the purpose of eliminating static electricity.
