The global Static Random Access Memory market size is predicted to grow from US\$ 351 million in 2025 to US\$ 304 million in 2031; it is expected to grow at a CAGR of -2.4% from 2025 to 2031.

SRAM (static RAM) is random access memory (RAM) that retains data bits in its memory as long as power is being supplied. Unlike dynamic RAM (DRAM), which stores bits in cells consisting of a capacitor and a transistor, SRAM does not have to be periodically refreshed. Static RAM provides faster access to data and is more expensive than DRAM. SRAM is used for a computer's cache memory and as part of the random access memory digital-to-analog converter on a video card.

The major players in global Static Random Access Memory market include Cypress, Renesas, etc. The top 2 players occupy about 60% shares of the global market. North America and Japan are main markets, they occupy about 90% of the global market. Synchronous SRAM is the main type, with a share about 30%. Automotive Electronics is the main application, which holds a share about 45%.
