The static spray ball is a nozzle device designed for cleaning the inside of a storage tank or tank. It is named for its unique spherical design and static working mode, which can achieve uniform cleaning of the inner surface of the tank through a specific arrangement and spray angle without relying on an external power source. The working principle of the static spray ball mainly depends on its internal structure and the arrangement of the spray holes. When the cleaning liquid passes through the spray ball, it is evenly distributed to each spray hole and sprayed onto the inner wall of the tank at a certain pressure and angle. This spraying method helps to peel off and remove dirt, residues, etc. attached to the tank wall. Static spray balls are widely used in various industrial production fields, especially those occasions that require efficient and uniform cleaning of large storage tanks or tanks. For example, in the petroleum, chemical, pharmaceutical, food and other industries, static spray balls are often used to clean key equipment such as oil storage tanks, reactors, fermentation tanks, etc.
